

Assignment 1

Select 1 of the following concepts and go to the primary literature (i.e., peer-reviewed original research journal articles ONLY) to find information to explain the concept. Concepts: *trophic cascade* or *trophic mismatch*. Each member of your team must find a (different) source. Using ALL of your sources, write an explanation of your concept and include at least 1 hypothesis (explanation that is testable) for your concept (see your text, Chapter 1 for information on hypotheses). Include in-text citations in proper CSE format. Use your journal articles as models of how to integrate in-text citations into your writing. The written portion of this assignment should be **no more than 1 page long**. However, a reference list formatted in CSE style and any supplemental information (graphs, figures, etc.) may be placed on the 2nd page.
