Lisa Jeffrey
(b. 1965)

Jeffrey was born in the US and grew up in Canada and Norway. She was educated in the US and England. She is a full professor at the University of Toronto, having earlier held positions at Princeton and McGill. She works in symplectic geometry and mathematical physics, often applying techniques from pure mathematics to prove results proposed by theoretical physicists. Jeffrey has supervised eighteen PhD students, two of them women. Jeffrey won the Canadian Mathematical Society's Krieger-Nelson Prize (2001) and Coxeter-James Prize (2002). She gave the AWM's Noether Lecture (2017), and was an AMS Fellow (2012) and Royal Society of Canada Fellow (2007).

This poster is part of the EvenQuads project, which combines innovative mathematical card games with learning about amazing women mathematicians. The project celebrates the 50th anniversary of the Association for Women in Mathematics.
