

Dionne Price

(b. 1971)

Dionne Price is a biostatistician who directs the Division of Biometrics IV in the Office of Biostatistics within the US Food & Drug Administration. Her research focuses on the design of clinical trials, and she has reviewed products for treating Ebola and coronavirus. Price was the first Black person awarded a

doctorate in biostatistics, which she earned from Emory University (2000). She was elected the first Black president of the American Statistical Association (ASA, 2023) after holding numerous other leadership positions in the society. Price was named a Fellow of ASA in 2018. She is also active in the International Biometric Society and is in demand as a conference speaker.

This poster is part of the EvenQuads project, which combines innovative mathematical card games with learning about amazing women mathematicians. The project celebrates the 50th anniversary of the Association for Women in Mathematics.
