

# Instructions

- Print out pages 2-14. If you cut all 13 sheets at the same time along the horizontal blue lines you will get stacks of 13 strips that are pre-sorted in a random order. In total you will get 12 of these stacks each time you print out and cut pages 2-14.
- Here is the correct order:
  - MALES
  - Meiosis initiated in puberty
  - Meiosis proceeds uninterrupted
  - Symmetric cell division
  - Symmetric cell division
  - 4 functional germ cells
  - FEMALES
  - Meiosis initiated in fetal development
  - Arrested at prophase of meiosis I
  - Resumption of meiosis upon puberty
  - Asymmetric cell division
  - Arrest at metaphase of meiosis II
  - 1 functional germ cell
