

## Unit 3, Activity 1

You are to identify at least three instructional resources that address geoscience concepts in each of the areas of geology, meteorology/climatology, oceanography and astronomy (minimum total of twelve resources). At least one resource in each topic area should be from the SERC site. Once these resources have been identified, you are to prepare an annotated bibliography for these resources. For each resource, you must include the following: title and URL or other citation as appropriate, a detailed description of the resource that includes the *specific geoscience content* addressed and which *methods of geoscience* students will use in completing the tasks described in the resource, the intended grade level, and a list of materials that are necessary for students to complete each investigation.
